

Super-charge your alert investigation with Respond®

Better, cheaper, more effective alert monitoring and investigation for security teams and security service providers

The Respond Analyst accelerates the discovery of security incidents by turning error-prone and resource-intensive monitoring and initial analysis into thorough, consistent and cost-effective automated investigations.

Its patented, mathematical-based decision automation technology processes raw security alerts at unprecedented scale and speed to accurately separate false positives from true security incidents, giving security analysts a powerful investigative tool.

“When someone asks us how many Tier 1 analysts we have, I can say that I have as many as you need.”

Travis Abrams
CyberPeak Solutions, MSSP

Key Features

- Automatically identifies high-probability incidents
- Processes millions of alerts in real-time with 100% consistency
- Dramatically reduces waste due to false positives
- Continuously learns and adapts
- Connects silos of alerts together into incidents

Near Instantaneous ROI | No Special Engineering | Easy to Integrate

In-House Security Teams

- Increase analyst productivity tenfold
- Handle more alerts, in more depth
- Seamlessly integrates with SIEM, SOAR and other systems
- Accelerate time-to-value with complex logic built in

Managed Security Service Providers

- Increase analyst productivity tenfold
- Improve customer satisfaction and retention
- Extend capacity - add more customers without more headcount
- Service multiple tenants with ease
